

TT Grounding System Installation

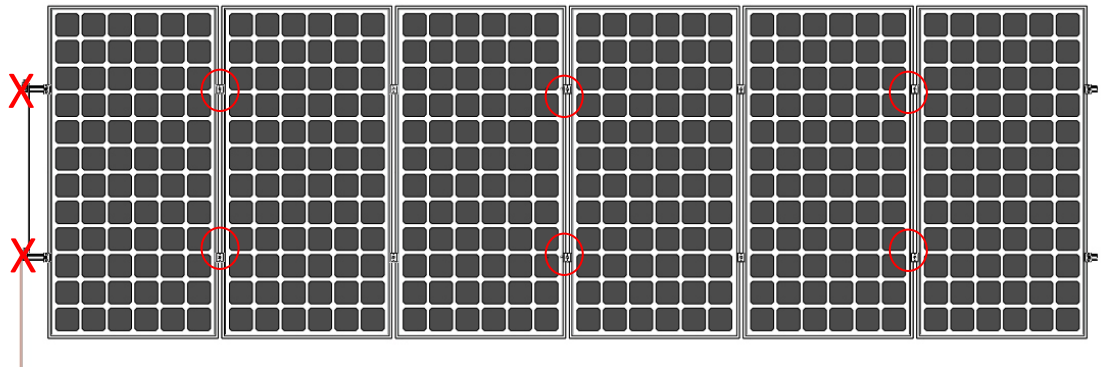

⌚ System Overview

Titan Solar grounding system has the special solution to lead the electron accumulated in the module to the ground. The grounding clips with special ribs is installed between two panels and lead the electron from modules to the rail. Then the grounding lugs connect the rails to the ground by the copper wire. It will be a cycle to keep the PV array safe.

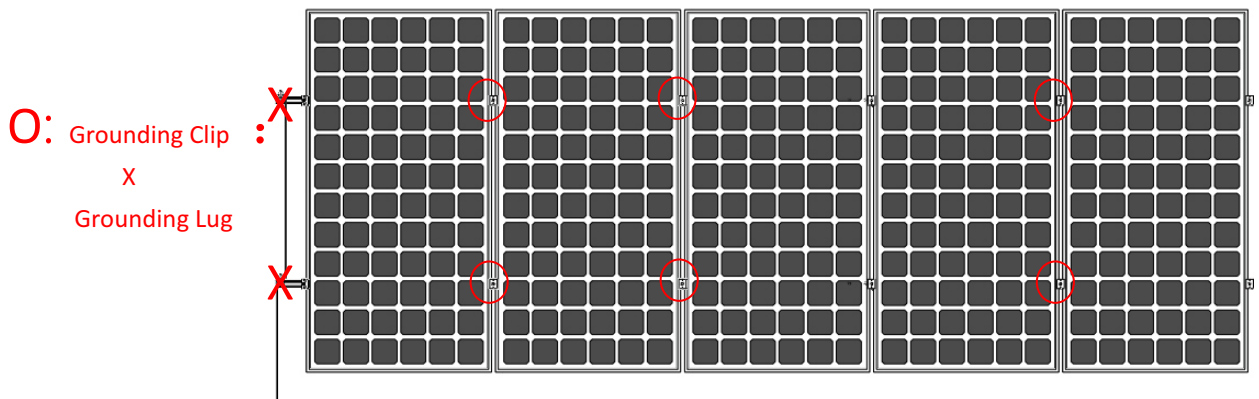

🕒 **Planning**

Solution 1 : no bonding jumper:

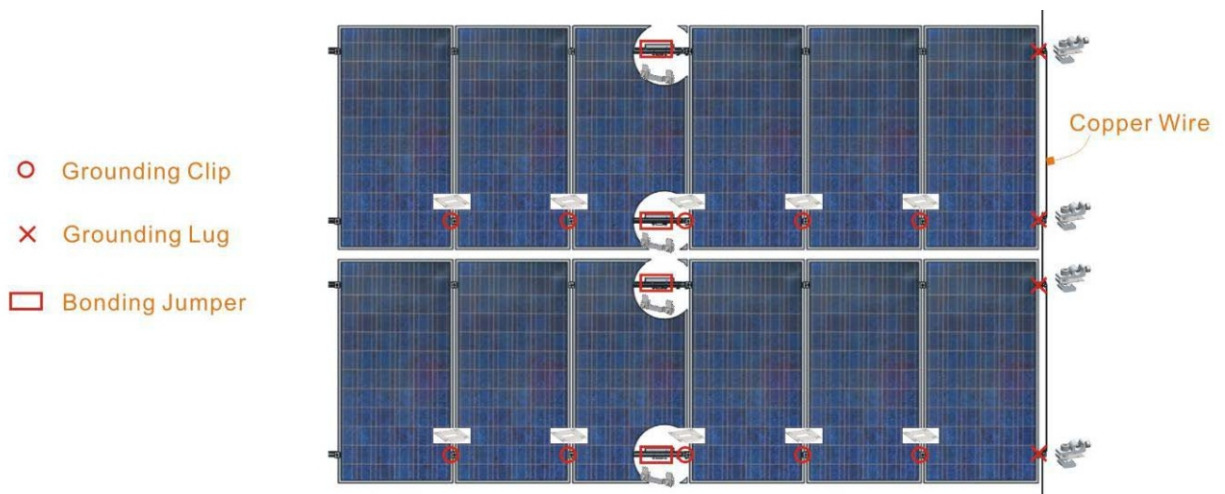

Even Number of Modules in row

Odd Number of Modules in row

Solution 2 : with bonding jumper

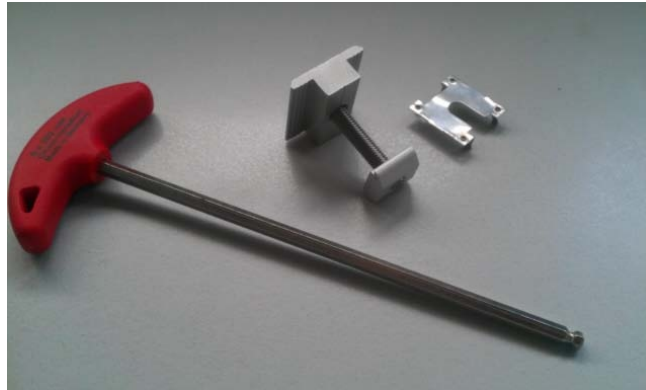

The above is the single grounding wire for entire array. Please family with the install position of the parts on the PV system.

⌚ Components Description

<p>Grounding Lug</p> <ul style="list-style-type: none"> ※ Fix the wire ※ Material:Tin plating on aluminum surface ※ Include 1pc M8*25 bolt,1pc M8 spring washer, 1pc M8,OD18 lock washer,1pc nut,1pcM6*15 bolt 	
<p>Grounding Clip</p> <ul style="list-style-type: none"> ※ Electric Conduction ※ Material:Stainless steel 	
<p>Bonding Jumper</p> <ul style="list-style-type: none"> ※ Electric Conduction ※ Material:Stainless Steel;Cu ※ Include 2pcs M8*25 bolts,2pcs nuts,2pcs grounding clips, 2pcs connecting clips, 2pcs M8 Spring washers 	

🕒 **Install Step**

Install the Grounding Clip

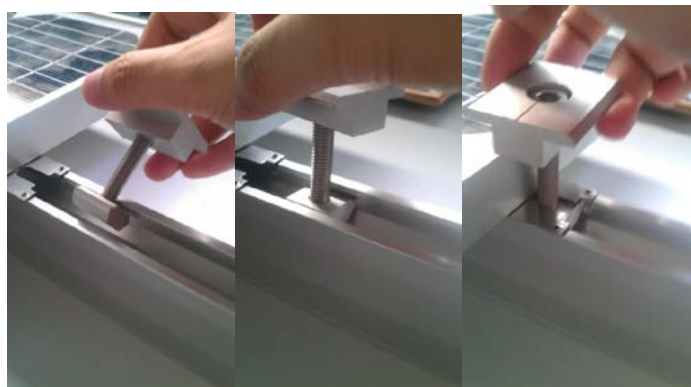

1. Prepare the tool and the parts
Tool: Allen key 6mm
Parts :Inter Clamp Kit and Grounding Clip

Tilt in press move

Uplift down

install inter clamp

2. Insert the open of the Grounding Clip into the bolt of the Inter clamp. Adjust and press the Clip to fit with the Module.

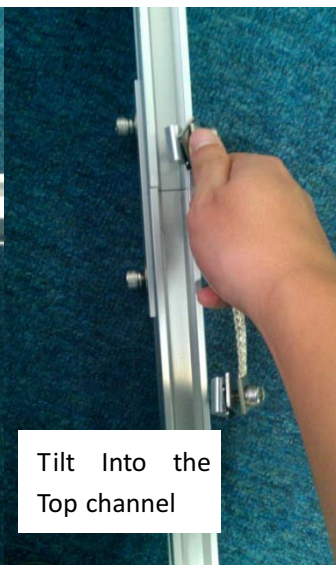

- Put the other panels into the other side of the inter clamp. On the right position, fasten the bolt by Allen Key

Install the Bonding Jumper

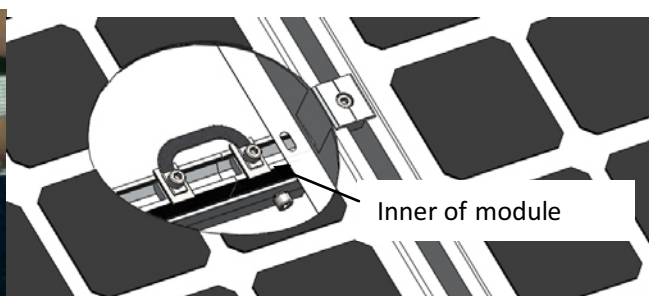

Break point

Tilt Into the Top channel

Fold the bonding jumper

Inner of module

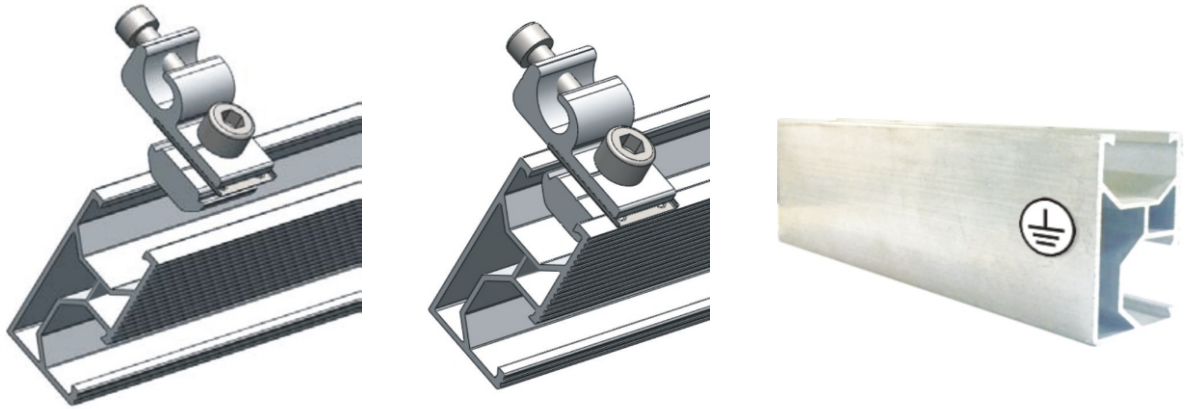

Bonding Jumper is installed on the break point of the rail which is in a line.

At first, put one side of the Bonding jumper into the top channel of Rail. Adjust the distance from the break point. Then, fasten the screw.

Second, Put the other side into the other side channel of Rail. Adjust and fasten. .

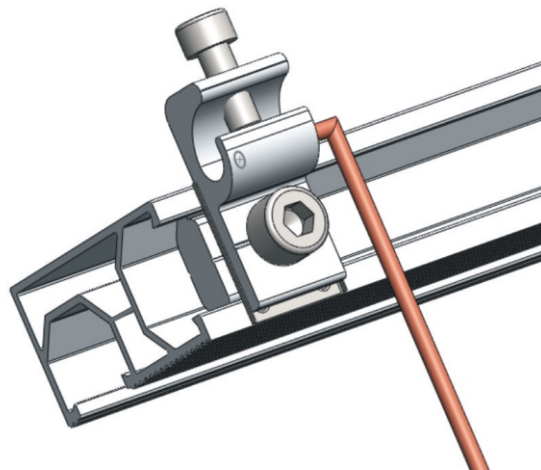

Please note the bonding jumper must be installed under the inner of the module

Install the Grounding Lug

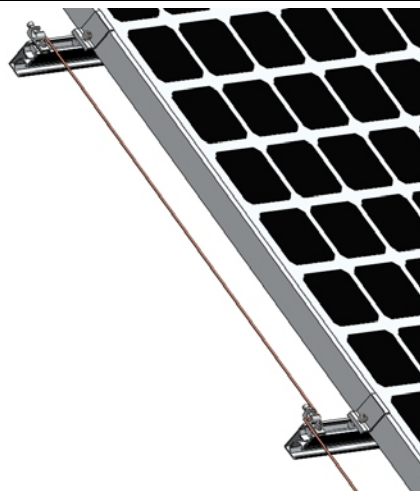

1. Put the Grounding Lug into the planning position of the top channel of Rail where has a grounding mark.

※Copper wire specifications:4mm²
Maximum temperature:90°C

2. Insert the copper wire into the open of the Grounding lug . And fasten the side bolt M6 to fix the wire.

3. Comply with the Step 2 to install the wire into the other Grounding Lug.
